Dear Hiring Team,

My name is Sidharth Premanand, and I am a UX/UI Designer with 3+ years of experience designing user-centred digital products across connected devices, e-commerce, and health-tech. I am currently pursuing my Master's in Human–Computer Interaction at Bauhaus-Universität Weimar, where I am deepening my expertise in research methods, cognitive psychology, and systems thinking. I am now looking for an opportunity to contribute to a design team where thoughtful problem-solving, clarity, and high-quality craft are valued.

Across my previous roles, I have worked end-to-end on complex product experiences—from research and problem framing to interaction design, prototyping, usability testing, and design system development. I enjoy translating ambiguous requirements into structured flows, simplifying complex systems, and creating interfaces that feel intuitive, consistent, and accessible. I work extensively with Figma, including component-based design systems, auto-layout, variables, prototyping logic, and developer-ready documentation.

I collaborate closely with product managers, engineers, and cross-functional stakeholders, ensuring that design decisions balance user needs, technical constraints, and business goals. I value clear communication, evidence-based reasoning, and iterative improvement. My experience working in fast-paced environments has strengthened my ability to take ownership, adapt quickly, and deliver high-quality work with attention to detail.

What motivates me most is designing products that genuinely improve people's experiences—whether by reducing friction, increasing clarity, or making complex tasks feel simple. I bring a structured, user-centred approach, strong visual craft, and a mindset focused on continuous learning and improvement.

Thank you for considering my application. I would be glad to discuss how my skills and experience can contribute to your team and support the design of meaningful, user-focused digital experiences.

Kind regards,

Sidharth Premanand
